

Java

```
class Solution {  
    public int shortestWay(String source, String target) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} source  
 * @param {string} target  
 * @return {number}  
 */  
var shortestWay = function(source, target) {  
  
};
```

TypeScript

```
function shortestWay(source: string, target: string): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    int shortestWay(string source, string target) {

    }
};
```

C#

```
public class Solution {
    public int ShortestWay(string source, string target) {

    }
}
```
